

Product Offerings Summary

✦ Technology/Supplier Overview

Wizzard Software is pleased to offer speech technologies from AT&T and IBM. Our speech technology suppliers have both been pioneers with speech technology and are corporate icons of American innovation. The target market for these speech technologies is enormous and extremely diverse, including just about any application that has some point of human contact. A summary of the technologies that Wizzard is offering follows our **Licensing Model Overview**.

✦ Wizzard Licensing Model Overview

Our Offerings are designed to for Developers to speech enable their applications by adding automatic speech recognition and /or text-to-speech to their products, and our Licensing Agreements are modeled for this environment. SDKs are available with “internal usage only” licensing, and may be purchased at the Wizzard Website or through Wizzard Sales. Any deployment or distribution of speech technologies or wavfiles requires additional licensing, with terms and prices based on volume and the environment (runtime, port, wavfile). For quotes and/or information regarding term/conditions, please contact Wizzard Sales.

✦ Developer Products Overview *(Details are available with each product on our web site)*

▶ **Enable your desktop or telephony server applications to *Speak* using AT&T Natural Voices for Windows or Linux.** Our offering includes a Software Developers Kit (SDK) for internal use and volume based licensing models (runtime, port based or wavfile) for deployment/distribution with your product.

▶ **Enable your desktop applications to *Speak* using IBM ViaVoice text-to-speech for Windows or Linux.** Our offering includes a Software Developers Kit (SDK) for internal use and volume based licensing models (runtime) for deployment/distribution with your product.

▶ **Enable your desktop applications to *recognize speech* using IBM ViaVoice Dictation or Command/Control for Windows.** Our offering includes an SDK for internal use and volume based licensing models (runtime) for deployment/ distribution with your product. **IBM Specialty Vocabularies** for General Medical or General Legal may be added to improve speech recognition accuracy in these environments, or the advanced developer can use the **Topics Factory** (in the SDK) to create supplemental vocabularies to be added to the standard, or the medical or legal specialty vocabularies.

► **Make your IBM ViaVoice Desktop Dictation enabled applications more Accessible to users with VoiceNet roving speech profile by Wizzard.** Our **VoiceNET Roving Speech Profile** offering (nicknamed "Rover") was created by Wizzard Software to provide a utility that allows IBM ViaVoice for Windows users to access their voice files (i.e. profile) from any workstation within a network.

► **Simplify and Accelerate the integration of speech-to-text and/or and text-to-speech into your applications with Voice Tools by Wizzard.** Our offering is an award winning set of ActiveX controls and objects that allow you to quickly and easily add speech recognition and text-to-speech to your applications. You can make voice dictation, command/control and voice response an integral part of your application by dropping these award winning ActiveX controls into your development environment (Visual Basic, Visual C++, etc).

► **Enable your server based applications to *convert voice audio into text* using WizzScribe (Voice to Text Server) powered by IBM ViaVoice .**

WizzScribe is a server based implementation that converts audio from a variety of sources into text for a wide range of application uses. Powered by IBM's proven and sophisticated large vocabulary voice recognition technology, WizzScribe applies that powerful technology to 21st century business environments by leveraging server architecture to add mobility, flexibility and scalability, thus opening up the applicability of this powerful technology to an exploding list of uses that go far beyond the traditional mind set associated with dictation technology.
