

# Our Vision Statement

**WIZZARD SOFTWARE** was founded in 1995 with a mission to become the leader in the speech recognition application development market. We were first to market with a speech recognition e-mail product in 1997, and first to launch an interactive, conversational speech recognition product that allowed users to have “live” dialogue with their PCs. As the speech industry began to grow, so did Wizzard. We recognized the opportunity to apply our technical know-how to assist other companies with their vital speech-enablement projects.

Our expertise is centered on the implementation of speech-to-text and text-to-speech technologies to your business processes in ways that improve the efficiencies of your most valuable resource: your people. As 21<sup>st</sup> century businesses continue to discover the value of speech in increasing numbers, we are pleased to offer our customer the benefit of our partnerships with world class technology providers like AT&T™ and IBM®, and the knowledge that comes from over nine years of speech related development projects.

## We make technology work for you.

TODAY, We go beyond traditional interfaces to enable smarter, more natural relationships between people and technology. We allow computers and other electronic devices to serve people better by enabling an “eyes free, hands free” environment where voice and sound are the primary communication methods.

**As a result everything gets done faster... easier...better.**

TOMORROW, We will continue to develop and grow as a company through acquisitions and partnerships that will benefit both our customers and shareholders through our new division called Technology and Services (T&S). As we move forward, additional divisions will be created to allow us to focus on expanding opportunities and build on our past success.

**AND, AS ALWAYS, We thank our customers for their past support and look forward to working with you in the future.**
